Hunter Douglas FR Aluminum Blinds help create environments that are comfortable, healthy, productive, and sustainable. Our products are constructed to minimize environmental impact while meeting the highest standards for industrial, institutional, and commercial applications.

A DAYLIGHT

Contact with the outdoors is a proven factor in employee productivity. Windows offer views and admit plenty of daylight. When tilted, horizontal blinds can reflect that light deeper into a space, spreading the benefits among more people and reducing dependence on artificial lighting.

B GLARE CONTROL

A range of slat spacings allows you to control how much light falls into a workspace, to eliminate glare and reflections. Perforation options help optimize use of natural light, ensuring visual comfort by reducing glare without blocking the view.

C MANAGEMENT OF THERMAL GAIN

Window coverings manage heat generated by the sun: when it is hot, they can be closed to minimize solar heat gain; when cold, they can be raised to allow solar heating.

AESTHETICS

Blinds filter daylight to create even, glare-free lighting levels within a space. They also ensure privacy and can provide a consistent look from the exterior of a building.

INDOOR AIR QUALITY

Poor air quality is a common source of employee concerns. All the components and slats in our blinds – including paints and other finishes – are certified for low emissions by the GREENGUARD Environmental Institute. Hunter Douglas FR Aluminum Blinds pass both the standard emissions and the stricter requirements for GREENGUARD Gold certification.

Hunter Douglas Architectural provides flexible control of virtually any motorized product on projects of any size. Our state-of-the-art components can be mixed in a given installation without limitations. They offer advanced controls for the highest levels of function and reliability.

By responding to changing conditions, automated blinds deliver a number of important enhancements to building efficiency and performance:

DYNAMIC MANAGEMENT OF THERMAL GAIN

Intelligent automated systems can position blinds based on the orientation of the sun.

INCREASED ENERGY EFFICIENCY

Automated systems contribute to energy savings by managing the amount of light and heat that comes through the window. Using natural light instead of artificial lighting can lead to energy savings.

AESTHETICS

Automated blinds provide a uniform look to the exterior of a building.

CONVENIENCE

Motorized blinds provide greatly improved convenience for user operation, eliminating the need to manipulate cords or rods. In addition, automated shades can improve performance of the shading system as a whole, as studies show that most people do not open and close shades in response to changing conditions outside.

Benefits

Our Aluminum Horizontal Blinds offer best-in-class durability, excellent value, reliable performance, and a wide range of options for commercial and contract applications.

INNOVATIVE DURABILITY

Bounceback slats with heat-treated, spring-tempered aluminum for best-in-class durability.

RELIABLE HARDWARE

Durable operating systems and slats ensure consistent performance.

SUPERIOR LIGHT CONTROL

A range of tape spacings, and our de-Light™ feature allow you to specify any level of light control.

SUSTAINABLE CONSTRUCTION

Slats contain 95% recycled aluminum and are certified for low emissions by the GREENGUARD Environmental Institute and passes the stricter requirements of GREENGUARDGold.

ENERGY EFFICIENCY

Tilted blinds diminish dependence on artificial lighting, allowing light to reflect deeper into a space.

UNMATCHED CUSTOMIZATION

Variety of aesthetic and performance options for any application.

LOW MAINTENANCE

Proprietary anti-static Dust Shield® finish and closed oval bottom rail inhibit dust buildup.

VERSATILE MOTORIZATION

Range of motorization and control options to maximize shading benefits.

COLORS AND FINISHES

Durable aluminum alloy slats are available in a wide selection of colors.

PRODUCT DETAILS

Standard features include box brackets, crash-proof cord lock, closed oval bottom rail, cord stop to single pull cord, and slip clutch tilters.

LIFETIME GUARANTEE

Model Selection

Aluminum horizontal blinds can be selected based on headrail dimensions, slat gauge, and tape spacing for individual projects.

Headrail

Headrail styles differ based on functionality and aesthetics – from the decorative beveled CD, to the industry-standard CL, and sturdy H2.

Slat Gauge

Heat treated, spring tempered aluminum slats are available in heavy-duty .008" gauge and industry standard .006" gauge.

Tape Spacing

Tape spacing options offer various levels of light control and view through.

Model CD 1" Decorative Beveled Headrail

Superb design, excellent value, and resilient construction make CD blinds an ideal choice for many architects, specifiers, and designers. The attractive design of the beveled steel headrail eliminates the need for a separate valance. Model CD88 features heavy-duty 1" x .008" slats, as well as our highest level of light control with tape spacing at just 18mm and de-Light™ feature to eliminate light leakage through routing holes.
