Solar Optical Properties are used to calculate the Shading Coefficient. The Shading Coefficient represents the percentage of solar heat gain that is transmitted to the interior through the glass and shading system. Darker colors provide maximum glare reduction and visibility.

- The Solar Optical Properties are used to calculate the Shading Coefficient.
- The Shading Coefficient represents the percentage of solar heat gain that is transmitted to the interior through the glass and shading system. Darker colors provide maximum glare reduction and visibility.
- The Solar Heat Gain Coefficient represents the percentage of solar energy directly transmitted and re-radiated to the inside through the glazing system.
